PhiBrows Eyebrow embroidery is a semi-permanent microblading treatment lasting between 12-18 months.

3D hair strokes are created using a feathering technique, to add thickness and definition to the brows with a natural finish.

This technique is more superficial than tattooing or many other semi-permanent brow treatments. A unique hand tool places the hair strokes into the epidermal layer. The ink shades are custom blended to give a tailor-made and natural finish, to enhance your natural features.
